FLOWER

DOES MY FLOWER CONTAIN THC?

Well, maybe a little... BUT the form of THC produced by the flower of the plant is THC-A. You'll most likely see THC-A listed on your product label/testing results. THC-A will convert to THC when it is heated (smoked/vaporized) via a process called decarboxylation. Flower will also contain other cannabinoids (CBD, CBN, CBG, etc.) and terpenes.

HOW CAN I CONSUME FLOWER?

Do I have to smoke it? NO, you can also vaporize your flower or cook with it to create your own edible products. Smoking uses a flame to combust the physical plant material, producing smoke for inhalation. With vaporizing, you load the flower into an ancillary device that heats the plant to a high enough temperature to lift the cannabis oil into a vapor that is inhaled into the lungs.

When cannabis is inhaled into the lungs, it provides for a very quick onset of effect. Consumers usually report feeling effects within 1-5 minutes and may last up to 2-3 hours. You do not need to fill up your entire lung capacity with smoke or vapor to benefit from inhaled cannabis. Start with a 1-2 second inhalation, fill the rest of your lungs up with normal air in the same breath and exhale naturally.

Individual results may vary. The long-term effects of inhaling cannabis into the lungs has not yet been well established.

DELIVERY METHODS:

R.S.O.

WHAT IS RICK SIMPSON OIL?

R.S.O. is a full-spectrum cannabis oil extract which can be taken orally or used topically. Full-spectrum extracts maintain the full profile of a cannabis plant; cannabinoids and terpenes.

HOW TO CONSUME R.S.O.:

Your R.S.O. product will come in a glass or plastic measuring syringe. Carefully extract the stopper on the syringe before administering the product, and replace the cap directly after use.

Consumers should be extremely cautious with oral dosing of R.S.O., as the oil most likely contains high concentrations of tetrahydrocannabinol (T.H.C.). Consuming too much T.H.C. may cause you to feel paranoid or anxious. Begin with a very small amount of oil; we recommend using the end of a toothpick to remove a dot that is $\frac{1}{4}$ the size of a piece of uncooked rice from the end of your syringe. Remember - this product is very concentrated so a little bit goes a long way!

ORAL DOSING:

You can put the oil onto food, mix into a beverage or add to an empty capsule to swallow. Effects will be slightly delayed, so wait 3-4 hours before repeating a dose.

SUBLINGUAL DOSING:

For a faster onset of effect, rub oil directly onto your gums. Place the oil onto a piece of hard candy and hold in your mouth if you need to mask the taste.

TOPICAL USE:

R.S.O. can also be used topically for various skin conditions. Mix with coconut oil for easier application.

Individual results may vary.
