

# DELIVERY METHODS: VAPE CARTRIDGES

## VAPE OIL CARTRIDGES

A vape oil cartridge is a glass cartridge pre-filled with medical cannabis oil. This oil contains various combinations of cannabinoids and terpenes extracted from cannabis. Vape oil cartridges come in many forms:

510-threaded cartridges (the most common), as well as some proprietary forms.

## HOW DO VAPE PENS WORK?

Vape oil cartridges work in conjunction with vape pen batteries. The vape battery will power an atomizer in the cartridge that heats up the oil, activating the various chemical components in it. You then inhale the vapor, which produces the effects of medical cannabis. Some vape batteries have multiple functions that enable temperature customization and dose management, while others are draw-activated and do not require the user to press any buttons to power.

## WHY CHOOSE A VAPE OIL CARTRIDGE?

### EASE OF USE.

Vape oil cartridges take the guesswork completely out of the equation. Contrary to other methods of consuming oil, carts require little-to-no effort—just press a button and inhale.

### PORTABILITY.

Vape oil carts are the easiest method of taking medical cannabis while on-the-go. Their sleek and minimalist design allows for discreet vaping and free of the distracting traits of larger setups. Unlike concentrates, using a pre-loaded vape pen allows for a highly controlled dose with each inhalation, giving you more control over how much or how little you consume.

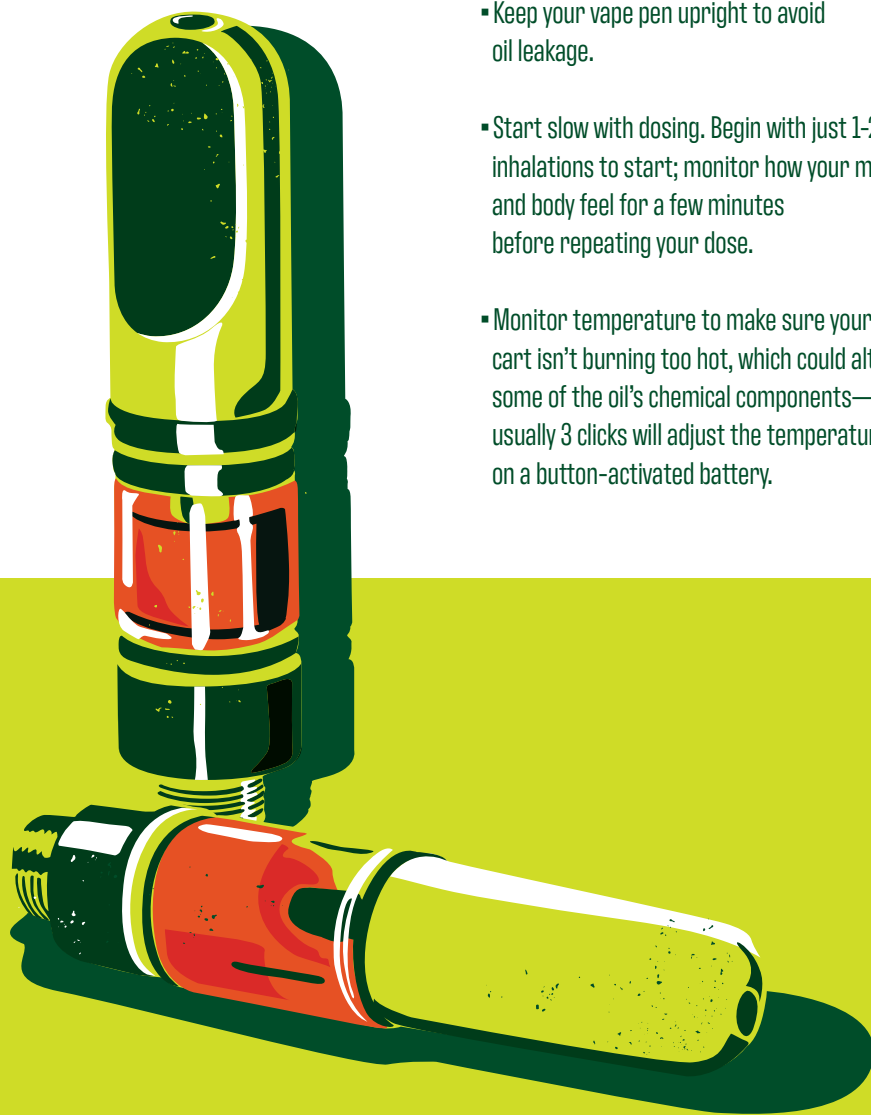

## HOW TO USE A VAPE PEN

It's pretty simple: Just attach your cart to the battery to start! If there's an On/Off button, use it.

### A FEW QUICK TIPS:

- If your device has an On/Off button, chances are you turn it on by clicking 5 times. The same number turns it off.
- Make sure your cart is completely attached to its battery to avoid any oil leakage.
- Keep your vape pen upright to avoid oil leakage.
- Start slow with dosing. Begin with just 1-2 inhalations to start; monitor how your mind and body feel for a few minutes before repeating your dose.
- Monitor temperature to make sure your cart isn't burning too hot, which could alter some of the oil's chemical components—usually 3 clicks will adjust the temperature on a button-activated battery.

## WHAT IS A 510 CARTRIDGE?

A 510-thread cartridge is the most common type of vape oil cartridge. "510" describes the type of threading that is used to screw the bottom of the cartridge to the appropriate vape battery. Ask a patient care specialist which battery is right for your cartridge!

## HOW LONG DOES A VAPE OIL CARTRIDGE LAST?

How long a vape oil cartridge lasts entirely depends on an individual's rate of consumption and the amount of vapor with each dose.

## WHY ISN'T MY CART FULL?

- Air pressure in the cart can lower the oil level.
- The cart reservoir might intentionally be designed to be larger.
- Extracted oil may be absorbed in the ceramic heating element.
